Algorithmic Trading and Short-term Forecast for Financial Time Series with Machine Learning Models Implementation and Testing Workshop

Date and time

July 29, 2024 9:30AM - 12:30PM

Registration

The increase in popularity of machine learning models and algorithms has brought up methods for increasing the efficiency of processes in various industries and new use cases. From corporations to individuals, machine learning is applicable in a wide range of settings. One such application is using machine learning models for stock price forecasting. This workshop will focus on automating financial data collection, training machine learning models for price forecasing and a demonstration of the integration prototype.

Location:
Room E-310 and Online in Zoom,
Okanagan College
1000 KLO Road, Kelowna, BC
